## PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building scalable enterprise applications using Java, Spring Boot, Angular, PostgreSQL, Apache Spark, Databricks, and Microsoft Azure. Strong background in backend development, RESTful APIs, performance optimization, and legacy application modernization. Expanding expertise in enterprise AI by contributing to the design of Multi-Agent AI systems using Spring AI, Azure OpenAI, RAG, and MCP to build secure, context-aware conversational applications.

## EDUCATION

- College of Engineering Guindy** Chennai, India  
*Bachelor of Engineering - Computer Science and Engineering; GPA: 8.89* *July 2019 - June 2023*

## TECHNICAL SKILLS

- Languages:** Java, C#, TypeScript, JavaScript, SQL
- Frameworks & Technologies:** Spring Boot, Spring AI, Spring Security, Angular, React, .NET Framework, REST APIs, WebSockets
- AI & LLM:** Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), AI Agents
- Databases:** PostgreSQL, MongoDB
- Cloud & Big Data:** Microsoft Azure, Azure Databricks, Apache Spark
- Tools:** Git, GitHub, Docker, Kubernetes, Apache Kafka, GitHub Copilot

## EXPERIENCE

- NielsenIQ** Chennai, India (Hybrid)  
*Software Engineer* *July 2023 – Present*
  - Enterprise Monitoring Platform** *Oct 2023 – Apr 2024:*
    - \* Architected and independently built an internal monitoring platform using **Spring Boot, Angular, and PostgreSQL**, replacing Excel-based tracking for **8 enterprise applications** spanning **~30 processing stages**.
    - \* Automated application status reporting and SLA monitoring through service integrations, eliminating repetitive manual tracking and providing leadership with centralized operational visibility.
  - Legacy Platform Modernization (Migration PoC)** *May 2024 – Jun 2024:*
    - \* Delivered a modernization proof of concept from a proprietary Java framework to **Spring Boot and Angular**, completing delivery **20 days ahead of schedule**.
    - \* Developed **10 Angular screens** (including **5 complex business workflows**) and built reusable UI components to accelerate feature development.
    - \* Implemented Spring Security and engineered seamless authentication between legacy and modern applications, enabling coexistence without disrupting existing user sessions.
  - Retailer Data Standardization Platform** *Jun 2024 – Jul 2025:*
    - \* Delivered enterprise features, redesigned report processing and SQL execution, reducing report generation time from **3–5 minutes to 10–15 seconds (~95% improvement)**.
    - \* Automated retailer onboarding using configurable templates, reducing manual configuration effort by **~80%**, and developed AI-powered engineering utilities to streamline repetitive design and infrastructure tasks.
  - Cloud ETL Platform** *Jul 2025 – Present:*
    - \* Developing backend services for a cloud-native ETL platform processing approximately **11 TB** of retailer data monthly across **15+ structured and semi-structured formats**.
    - \* Migrating core business capabilities from a legacy .NET Framework application to a distributed Spark-based architecture using **Apache Spark, Databricks, and Azure**.
    - \* Delivering scalable batch-processing enhancements, production fixes, and data transformation workflows while maintaining functional parity with the legacy platform.
  - Enterprise Multi-Agent AI Platform** *Apr 2026 – Present:*
    - \* Co-designed an enterprise **Multi-Agent AI** platform using **Spring AI, Azure OpenAI, PostgreSQL (pgvector)**, and **Redis** for AI-driven knowledge retrieval and workflow automation.
    - \* **RAG, MCP tool integration**, and **Human-in-the-Loop** approval workflows to enable secure and governed AI-assisted operations.

## PERSONAL PROJECT

- SmartPrint** In Progress
  - Print Management System:** Built a full-stack print management application using **Spring Boot, Angular**, and **PostgreSQL** for document uploads, print order management, and order tracking.
  - Authentication & Live Tracking:** Implemented secure user authentication using **JWT** and enabled real-time order status updates with **WebSockets**, improving user experience through instant notifications.
  - RESTful Backend Development:** Developed RESTful APIs following layered architecture principles, integrated PostgreSQL for data persistence, and implemented CRUD operations with efficient database interactions.
